

UN OPERATIONS & CRISIS CENTRE

Orbis – Install Guide

Self-service crisis & reference mapping · Version 1.0.0 (build 4)

iPhone & iPad

IOS · TESTFLIGHT

INVITE LINK

testflight.apple.com/join/srYNfqN4

- 1  **Install TestFlight.** Open the **App Store**, search **"TestFlight"** (by Apple), and tap **Get**. This is how Apple delivers test apps.
- 2  **Open the invite link** on your device: <https://testflight.apple.com/join/srYNfqN4>
- 3  **Accept & Install.** Tap **Accept**, then **Install** next to **Orbis**.
- 4  **Open Orbis & sign in.** Launch Orbis and sign in with the **UNOCC username and password** provided by your UNOCC admin.
- 5  **Start mapping.** Try **Map Gallery** to browse reference maps, or **Request a Map** to generate one.

Already have Orbis? Open **TestFlight** → **Orbis** → **Update** for the latest build. If it doesn't appear, pull down to refresh.

Android

GOOGLE PLAY · INTERNAL TESTING

1  **Join the test.** On your Android phone, open the **tester invite link** from your UNOCC admin and tap **Become a tester**. Your phone must be signed in to the Play Store with the **same Google account** you gave your admin — the tester list is allow-listed, so Orbis stays hidden from any other account.

2  **Install from Google Play.** The link opens the Orbis page in **Google Play**. Tap **Install** (or **Update** if you already have it), then wait for it to finish.

3  **Open Orbis & sign in.** Launch Orbis from your app drawer and sign in with your **UNOCC username and password** — the same login as iOS.

 **Don't see Orbis in Google Play?** You're almost certainly signed in with a different Google account. Switch the Play Store to the account your admin added to the tester list, then reopen the invite link.

 **Access:** Orbis is restricted to authorised UNOCC users. Maps and data stay within the UNOCC service.
